Certain soft-gels, topical products, and capsules should also be avoided because they contain ethyl alcohol. This is especially true of Nasonex, Flonase, and Antabuse nasal sprays. Many of the mouthwashes have alcohol too, so be sure you check all the labels before you buy.

These are the common medications that you want to stay away from as a recovering substance abuser. And, above all, if you and your physician, with full knowledge of your history, feel that any of the above medications should be used, then they can be prescribed. However, they must be used with extreme caution and close supervision.

In addition, if used, they should only be on a short-term basis. A well-trained physician who understands addiction should be able to provide you with acceptable alternatives and the safest treatment plan. Below is a table of the medications you can use safely for some common conditions. There may be others, and it is best to always speak with your physician about any medication you are thinking of taking.

Zyrtec cetirizine Mucinex guaifenesin. Tessalon Perles benzonatate Beano. It is important to point out that manufacturer formulations and ingredients change, so what was once on the acceptable list for a recovering addict, may not always be. Because of the chronic nature of substance abuse, relapsing is possible. The good news is there are medications, such as Naltrexone, Subutex, Campral, and others that you can take that will help you manage cravings.

Your doctor can direct you to some pharmacologic interventions too. You might have to get some blood work done before you start using any of these medications. Ultimately, successful recovery is up to you. Your goal of recovery should be to live a healthy and clean life. It just means you have to make wise decisions about the medications you take for these conditions. It is absolutely possible to live a clean life and reach your goals of happiness.

But, you do have to work hard and stay away from anything that will cause you to relapse, and that includes refraining from certain medications. Your body is still learning how to function off your substance of choice and you are healing from emotional challenges as well. So, before you reach for those pills, even if they are natural remedies, make sure you read the labels and ask about their ingredients.

For additional details on medications that are to be avoided and those that are safe to take for people with a substance abuse condition or are in recovery, the American Academy of Family Physicians has a reference guide to help avoid a relapse into addiction. If you are in recovery for an addiction and have additional questions about medications, contact us here at JourneyPure At The River at With addiction rates on the rise, the need for health insurance for rehab coverage continues to rise with it.

This is because, thanks to the Affordable Care Act of , health insurance plans are now required to cover mental health issues. Because of Anyone addicted to alcohol is suffering from the chronic disease of alcoholism. Should a person not receive proper treatment for this condition, they can suffer a variety of debilitating health problems that can eventually lead to death.

There is a v Among the many types of substance abuse, none are more destructive than alcoholism. It has been estimated that approximately 80, Americans die every year in accidents or from ailments that are related to the excessive consumption of alcohol produc Call Us at Today One of these challenges includes avoiding medications that may interfere with your recovery.

Detox is Good First, detox was the foundation of your addiction recovery and was absolutely necessary. Understanding

Cross-Addiction Cross-addiction occurs when one who has struggled with addiction exposes the hypothalamus or meso-limbic system to new chemicals or drugs.
